

## MOTIVATION LETTER

My name is Efrian Muharrom, I am 23 years old. I have been taken the Bachelor degree in Forestry and graduated with honors from Forest Products Technology Department, Faculty of Forestry, Bogor Agricultural University (IPB) with GPA 3.10/4.00. My thesis for the completion of study titled “Cajuput Oil Production Cost Analysis; A Case Study in Jatimunggul Lama Cajuput Oil Factory, KPH (State Forest Enterprise) Indramayu, Perum Perhutani (Public Company of Indonesian Forestry) Unit III West Java and Banten”. I was working this topic due to my interest on forest economic, further more with forest valuation, which plays important role in establishing policies to support both economic and social welfare growth, especially in developing countries.

Learning is a never ending process, more over related to the importance of developing human resources in order to contribute to the development of nations, therefore I am really interested to join MSc-EF program. Even more with my previous strong background and experiences, I want to study in the field of environmental management policies in Europe especially that links with sustainable forest management; Forest resource economics and finance, Forest policies, Forest industries, Land use and other related courses.

In the future I am planning to do my master research that concern about “forest valuation in Europe and its influences to policies in European forestry”, in order to benchmark and comprehend the implementation of forest valuation in Indonesia.
